THE PAPER KIT · TWELVE SHEETS FOR THINKING, NOT TRACKING

The workflow sheets record what happened; these decide what should. Structure is cheapest on paper — a re-ordered movement costs an eraser here and forty generations after Gate C. Each sheet is the paper twin of a bible step, in the same order the run sheet walks.

The loop

- 1 **Print** the sheet for the step you are on. Letter, portrait, black and white is fine.
- 2 **Pencil.** Thumbnail, strike out, re-order, argue in the margin. Nothing here costs a credit.
- 3 **Photograph** the marked sheet — the bible's **Paper** panel has a notes camera that keeps the photo with the step, or drop the picture straight into the Claude session.
- 4 **Iterate.** The session reads the marks, revises the prompts and the sheets, and you reprint. Each round of photo → revision is logged with the step, so the loop gets sharper as the pile grows.

What is in the kit

02	Phase 0 ledger	RUN steps 1-14 — the 42 references, in generation order
03	Gate A review	RUN step 15 — identity lock, on paper before you call it
04	Anchor string	Phase 1 — thumbnail all 39 anchors before generating one
05	Storyboard 6-up	equal frames, large — one drawing per idea
06	Storyboard 12-up	equal frames, small — alternates and coverage
07	Pulse · 12s ticks	equal TIME — 25 frames, one every 12 seconds
08	Ribbon · weighted	box width = shot length — draw inside the time you have
09	Gates B + C	contact-sheet drift hunt, then the timing lock
10	Shot cards	Phases 3-4 — draft and final passes, 23 shots
11	Methods	what wins now, and the two methods this production adds
12	Finish + submit	Phases 6-7 — the order that cannot be reversed, and the MVS

One rule: nothing on paper is canon until it is carried back into the bible. The sheet proposes; the app decides; the printed kit is regenerated from the app's own data so the two can never drift.
