

Matter of Light

HIGGSFIELD GLOBAL FILM FESTIVAL · 5:00 · 21:9 · DEADLINE SEP 3, 11:59 PM PT

42 references 39 anchor frames 23 shots 34 run-sheet steps 5 gates ~200 images: ~76 video

How to use this kit. Print it, clip it, keep a pencil on it. Squares are things to tick; ruled lines are yours to fill; anything already printed in *grey italic* is a suggestion read from the project as of Aug 27 — confirm or strike it, don't trust it. The app is the source of truth for prompts; these sheets are the source of truth for **what is actually done**. Tables are generated from the bible's own data, so counts here always match the app they were printed from.

The last seven days

A compressed plan from today to the deadline. One line per day; write what actually happened beside it.

Aug 27	Finish Phase 0 — split the handles, remaining references, four lighting plates	<i>actual</i> _____
Aug 28	Gate A identity lock → anchor frames, Movements I and II	<i>actual</i> _____
Aug 29	Anchors Movement III → Gate B → stills reel → Gate C timing lock	<i>actual</i> _____
Aug 30	Cheap motion pass, all 23 shots → Gate D motion lock	<i>actual</i> _____
Aug 31	Final generation — Movement I, start Movement II	<i>actual</i> _____
Sep 1	Final generation — finish Movement II, Movement III	<i>actual</i> _____
Sep 2	Deflicker → upscale → grade → Gate E picture lock → sound	<i>actual</i> _____
Sep 3	Watermark + packshot, public post, rights pass, verify project — SUBMIT	<i>actual</i> _____

The five gates

A gate is a hard stop — nothing downstream begins until it holds. Date each one the moment it locks.

Gate A	Identity lock — every face, palette and plate final	☐ _____
Gate B	String lock — all 39 anchors on one contact sheet	☐ _____
Gate C	Timing lock — runtime, order and shot count freeze	☐ _____
Gate D	Motion lock — every seam confirmed at draft tier	☐ _____
Gate E	Picture lock — no further generation	☐ _____

Open decisions, still. (The title is decided: *Matter of Light*, everywhere.) ① @Drowning — define or delete: _____ ② Leviathan scale reference object: _____

How a film gets made here

The seventeen steps, in order. ♫ marks where a second pass is expected; ♫♫ where several are and the budget should say so. Grey rows are gates. Date each step when it is genuinely finished — not when it is started.

STEP	DONE	DATE
01 Decide the film before you open anything Fix the runtime, the shot count and how many identities appear on screen. Everything downstream derives from these three.	☐	_____
02 Create the project Make it inside the contest or workspace that will verify it, and generate everything there from then on.	☐	_____
03 Generate the governing rule sheet ♫ One image that fixes how your world's central visual idea works. It needs no identity and no location, so nothing blocks it.	☐	_____
04 Lighting plates, one per movement ♫ Empty frames, no characters. Key direction and palette only.	☐	_____
05 Train identity ♫ ♫ One trained Soul per character. Never two for one person.	☐	_____
06 Build the world ♫ Locations, props, creatures, effects. Plain backgrounds, one asset per sheet.	☐	_____
07 GATE A – identity lock Every reference side by side in one view. Look for a face that moved.	☐	_____
08 Anchor frames, in film order ♫ ♫ The first and last frame of every shot, generated as one continuous string rather than per scene.	☐	_____
09 GATE B – string lock Every anchor on one contact sheet, in order. Read it as a comic strip.	☐	_____
10 Stills reel Cut the anchors on a timeline at their real durations and watch the whole thing.	☐	_____
11 GATE C – timing lock Durations are now fixed. Changing one after this point breaks the total runtime.	☐	_____
12 Draft motion, cheap tier ♫ Every shot, lowest usable quality, no exceptions and no favourites.	☐	_____
13 GATE D – motion lock Watch it end to end at draft quality. Every camera move and seam is decided here.	☐	_____
14 Final shots ♫ ♫ Highest quality tier, one movement at a time, in film order.	☐	_____
15 Finish Deflicker first, then upscale, then grade. That order, always.	☐	_____
16 GATE E – picture lock No further picture changes. Audio is built against this cut and nothing else.	☐	_____
17 Audio, then deliver ♫ Score, dialogue, sound design. Audio is usually exempt from from-scratch rules — check, then reuse freely if it is.	☐	_____

The run sheet

All 34 steps in production order — grey dates are the compressed targets; overwrite them in pencil with the real ones.

Phase 0 — the 42 references

Tick when the **A variant is selected, named and favoured** in the project — generated is not done. The short blank takes the winning take number. Generate the Rule sheet first: everything else grades against it. B / C / D variants are optional and wait until Gate A.

Phase1 — the 39 anchors, in film order

One row per image. S shared join (one image, two shots) · B bridge (the seam itself) · M matched pair across a transition · single. Tick when selected and named; the blank takes the take number. Work strictly top to bottom so shared joins are generated once and inherited.

--	--	--

39 images, not 46 — 7 slots are shared joins or bridges. Batch of 4 per anchor, select 1. Attach the movement's lighting plate and the relevant Soul on every generation. **F35 is the film** — biggest batch, longest look.

Phases 3–4 — the 23 generations

Two boxes per shot: **draft** (cheap tier, Gate D) and **final**. A shot that fails three times leaves the queue for the escalation ladder — it does not get a quiet fourth try. Movement II must be generated in sequence: S7's end frame is S8's start frame.

Before you submit — the list that disqualifies

Every line here is a rule with teeth, not a style note. An entry missing an MVS component does not compete.

- ☐ Official watermark + packshot on the final video
- ☐ Public post (IG / YT / X / Reddit) — film with both intact
- ☐ Post AND account load in a logged-out window
- ☐ Every asset still inside the submission project — deleted nothing
- ☐ All prompts swept — no novel term anywhere
- ☐ Licence clause read: exclusive / assignment / underlying works / moral rights
- ☐ English subtitles or VO for all dialogue · MP4/MOV · ≤4K · 21:9
- ☐ End card: “Original screen story by B.L. Barkey”
- ☐ Submitted — with a day of margin, not at 11:58
